This is all you need to make a standard screw a self-locking screw.
This is the revolutionary new Spiralock* tap. It creates a unique female thread form that locks a standard male fastener firmly in place—without the addition of costly and bothersome locking gadgets, inserts or coatings. Plus, it actually improves the holding power of your fasteners.
WEDGE RAMP
STANDARD THREAD FORM
SPIRALOCK TAP THREAD FORM
The female thread form produced by the Spiralock tap has a unique 30° wedge ramp. This ramp does not affect the free-spinning relationship of the male/female threads until the clamp load is applied. At that point, the crests of the threads on the standard screw are drawn tightly against the wedge ramps. This creates continuous spiral contact along the entire length of the thread
LOAD
engagement, spreading the clamp force more evenly over all the threads.
By comparison, conventional vee threads concentrate up to 70% of the total load on the first engaged thread—contributing heavily to most screw failures caused by overstress and fatigue. So instead of a single thread taking 70% of the clamp load in shear—each thread produced by a Spiralock tap takes its share of the load in compression. Extensive testing on the Junkers transverse load vibration equipment has verified these claims. So send for a free Spiralock Tap Catalog today. It's all you need to make a better product. At less expense. Spiralock, Detroit Tool Industries, 2200 Eleven Mile Rd., Warren, MI 48091. Phone: (800) 521-2688 or (800) 482-2679 in Michigan.

COST EFFECTIVE QUALITY
ON TIME . . .
AT THE RIGHT PRICE
No matter what MOTOR HOUSING you have to fabricate, we can show you the most cost-effective method. Single and multi-process parts, in a variety of sizes can be produced in high volumes with Just In Time deliveries. Unparalleled quality combined with targeted consistency set us apart as a truly credible source of your components. Let us show you how we may be of value to your company. DIRECT IN-CYLINDER MEASUREMENTS

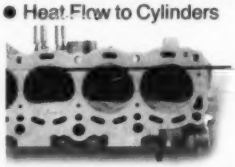
Now, for the first time, a new optical fiber sensor allows real time measurement of cylinder gas temperatures, velocities, and heat flows inside engine cylinders.

The sensors mount directly in the cylinder head and provide cycle by cycle data on the cylinder gas dynamics to 10 KHz for investigation of:

- Flame Propagation
- Knock
- Valve and Manifold Performance
- Heat Flow to Cylinders



Optical Fiber Sensors

The sensors are rugged, simple to install and have been engine proven to 5000 RPM during thousands of miles of road testing.

The Accufiber Model EAS 100 multi-channel engine analysis system comes complete with sensors and data acquisition hardware and software. Finite element codes compute the heat flow to the sensors

and heat transfer software resolves this information into cylinder gas temperatures and velocities.

For a description of the system and test results from leading manufacturers' production engines, **Call: (206) 696-1602**

LINK
DESIGNERS AND MANUFACTURERS OF TEST AND AUTOMATION EQUIPMENT

Brake Testing

Link Model D1500 is rapidly becoming the standard for full scale testing of brakes and friction materials, enabling close correlation to actual brake system performance. It represents the state-of-the-art in brake and friction material evaluation, while maintaining correlation with a vast data bank of testing performed throughout the world. Results from the Link D1500 are used to certify automotive friction materials.

The dedicated microprocessor based dynamometer control system precisely regulates and monitors all test functions. An optional inertia system and variable speed drive expand the system into a true compact dynamometer. Auxiliary parking brake and static torque mechanisms are available to simulate real life conditions.

ANCHOR'S
TAP FORM
roll-forms its own perfectly mated threads

Anchor's new high performance thread forming screw helps cut production costs!

Assembly is faster because TAP FORMS don't need tapped holes. Their unique square point lets them drive straight and fast. TAP FORMS have greater holding power. Cold flow forming of metal adjacent to the full-round thread form assures maximum holding power because of the 360° thread form contact. TAP FORMS drive with lower torque and offer chip-free thread forming. TAP FORMS are ideally suited to a wide variety of fastening applications where vibration and shock loosening have proved troublesome. TAP FORMS work equally well in all metals and castings.

CALL ANCHOR TODAY
312/681-2100
for more information about thread forming screws.

POWDERED METAL
PRODUCTS COMPANY

9700 Waveland Avenue
Schiller Park, IL 60176
(312) 678-2836 FAX (312) 678-0125

When it comes to powdered metal parts, be sure to contact Chicago Powdered Metal Products Company. Large and small multilevel powdered metal parts are molded in 60 presses with capacities up to 825 tons, then heat treated in one of 17 furnaces designed exclusively for sintering powdered metal parts. Chicago Powdered Metal Products makes a commitment to provide you with the highest quality parts—our strict quality control procedures follow your job from concept to shipment.

Forty years of experience and engineering know-how provide us with capability to cut your cost and improve your quality while assuring on-time delivery. Send for a copy of our 8-page brochure.
